Company Overview

PRODUCT

AI-powered ITSM platform — help desk, asset management, automation

POSITION

Competes with ServiceNow, Freshservice, Jira Service Desk, BMC Helix

VALUE PROP

"AI takes care of the daily grind so IT teams can focus on what matters"

CUSTOMERS

Honda, Toyota, Xerox, Motorola Solutions, University of Michigan, BDO

Leadership

NAME

TITLE

BACKGROUND

Avi Kedmi	CEO	Former LivePerson exec. Founded ML startup (acquired 2012). MBA Kellogg-Recanati.
Sasha Shapirov	CTO	28yr R&D. Ex-ClickSoftware (acquired by Salesforce), ex-Codefresh CEngO.
Jason Schwartz	CFO	Ex-Similarweb (took them public NYSE:SMWB). CPA. Ex-Shopping.com (IPO).

AI Product Suite

SysAid Copilot AI assistant for IT — conversational querying, ticket summarization, reply drafting.	AI Agents Pre-built agents automating ITSM tasks (onboarding, license assignment, account unlock).
AI Agent Builder No-code tool for building custom AI agents — democratizes AI in IT teams.	Agentic Service Mgmt Newest offering — autonomous AI-driven service management across the tech stack.
AI Governance & Security Guardrails, controls, and compliance for enterprise AI deployments.	AI Certification Training program for partners and employees to build AI skills.

Key claim: 60%+ of incidents auto-resolved before becoming tickets. Integrates with M365, Azure AD, Slack, Salesforce.

Your Fit — Why You're a Strong Candidate

1 AI That Drives Outcomes SysAid claims 60%+ incidents auto-resolved. You delivered 98% manual review reduction and 90% model accuracy at Oqton. You have proof that AI products deliver real, measurable impact — not just promises.

2 Bridging Engineering and AI

SysAid's CTO Sasha Shapirov has 28 years in R&D. Your path from mechanical engineering → physics simulation → AI PM means you speak both "how things work" and "AI product." Most PMs come from one side only.

3 Concept to Scale

SysAid is expanding AI features rapidly. You built an AI platform from concept → 5 enterprise customers in 5 months. You know how to take AI from zero to production adoption.

4 Customer-First AI Thinking

SysAid's brand is "AI that makes IT teams' lives better." You simplified onboarding and reduced manual review — customer-first AI, not tech-for-tech's-sake. Direct cultural fit.

Talking Points to Weave In

Competitive positioning

"I noticed SysAid positions against ServiceNow, Freshservice, and Jira. With an AI-first approach, you're uniquely positioned against legacy ITSM players — similar dynamics to what I experienced in my market."

AI Agent Builder insight

"Your AI Agent Builder is strategically smart — the no-code angle is critical for democratizing AI in IT teams that don't have ML engineers on staff."

Auto-resolution comparison

"The 60% auto-resolution stat is powerful. At Oqton we saw similar dynamics — when you reduce manual work by 98%, the value prop sells itself."

Your one-sentence differentiator

"I'm a PM who came from mechanical engineering into physics simulation, then into AI — so I can deeply understand complex systems AND ship AI products that solve real problems."

? Expected Questions

1 "Walk me through how you built the AI monitoring platform at Oqton from scratch."

Frame: Problem → approach → iteration → results. Start with the pain (manual review of production data), your 0 → 1 process, the 5-customer rollout, and the 98%/90% numbers. Emphasize customer discovery and how you validated the model's decision engine.

2 "How do you decide what gets AI and what doesn't?"

Frame: High-volume repetitive tasks first, where errors have low cost. AI for augmentation before automation. Manual review for edge cases. At Oqton, we targeted the 80% of cases the model could confidently handle.

3 "How would you improve SysAid Copilot?"

Frame: Start by understanding current usage data. If I had to guess without data: (1) make Copilot proactive — suggest actions before users ask, (2) tighten integration with Agentic Service Management so Copilot can trigger agents, (3) improve the feedback loop so Copilot learns from agent corrections.

4 "How do you measure AI product success beyond accuracy?"

Frame: Time saved per IT agent, reduction in mean-time-to-resolution (MTTR), CSAT scores, adoption rate (% of eligible tickets handled by AI), escalation rate (how often AI-touched tickets get escalated to humans), and net promoter score from IT teams.

5 "How is AI Product Management different from traditional PM?"

Frame: AI PM needs to manage model uncertainty — you're shipping probabilistic systems, not deterministic ones. More investment in evaluation/data quality. Closer collaboration with research/ML teams. User trust is harder to earn and easier to lose. You measure in ranges not exact numbers.

6 "Why SysAid? Why AI for IT service management?"

Frame: ITSM is a massive market dominated by legacy players (ServiceNow). AI-native approach is a genuine disruptor. SysAid's focus on making IT teams' work better — not replacing them — resonates with my experience building AI that augments human work. Also: Israeli company, AI-first culture, hybrid in Israel.

Questions You Should Ask

- A** "What does success look like for this role in the first 90 days? First 6 months?"
- B** "Which AI product would I own day one — Copilot, AI Agents, or something new?"
- C** "How does product management interface with the AI research and ML engineering teams?"
- D** "SysAid positions against ServiceNow. How does AI change that competitive dynamic?"
- E** "What's the biggest AI capability customers are asking for that doesn't exist yet?"
- F** "How does the CEO's ML startup background influence product culture?"

Logistics & Checklist

DURATION

45 minutes

- ☐ Charged laptop, stable internet
- ☐ Have your resume ready (on Drive)

☐ Prepare 1-2 specific ideas for SysAid AI features

☐ Review your "why AI for ITSM" narrative
