

Michael Korenevsky

Product Manager | AI-Powered Insights & Decision Support

☎ 050-9542810 | ✉ korm85@gmail.com |  linkedin.com/in/michael-korenevsky

Product Manager with a B.Sc. in Mechanical Engineering, specializing in AI-powered monitoring platforms and automated insight generation. Expert in translating complex telemetry and high-stakes data into actionable decision-support systems. Shipped high-performance applications executing automated anomaly detection for regulated industries. I lead product strategy from technical discovery through market launch, ensuring complex AI logic delivers measurable gains in user efficiency.

EXPERIENCE

Oqton

Senior Product Manager - *AM Monitoring & Inspection* Feb 2025 - Present
Oqton builds industrial software automating manufacturing workflows, serving enterprise factories running high-value production at scale.

- Launched AMVero, an AI monitoring platform that generates "As Built" 3D digital twins from real-time data, signing 5 enterprise customers within 5 months of release.
- Engineered an AI pipeline for anomaly detection with 90% accuracy, acting as the primary decision engine for whether high-value production runs continue or stop.
- Reduced manual data review time by 98% (saving ~\$150K annually per machine) by automating compliance reporting and historical traceability for tier-1 aerospace and defense clients.
- Owner of the "Intelligence Layer": Defined the logic for how AI suggestions are surfaced and prioritized for end-users in high-pressure environments.

Oqton

Product Manager - *Simulation Suite* Feb 2022 - Feb 2025

- Led the product direction for engineering simulation tools, focusing on predictive modeling of complex physical processes to prevent manufacturing failures.
 - Translated complex physics-based simulation engines into intuitive user interfaces, bridging the gap between deep technical simulation outputs and actionable insights for engineers.
 - Managed the simulation roadmap, prioritizing features based on predictive accuracy, computation speed, and integration into broader manufacturing workflows.
 - Customer Discovery: Conducted deep-dive sessions with enterprise users to understand the logic required to model "real-world" physical behaviors accurately in a digital environment.
-

3D Systems

Software QA Team Lead Jan 2017 - Feb 2022

Global technology leader in industrial 3D printing and production software.

- Managed a 4-person QA team testing complex 3D geometry processing and industrial printer control software.
- Defined testing scope, quality gates, and cross-functional release schedules to ensure stable delivery of code to enterprise factory floors.

3D Systems

Software QA Engineer - Founding Team

2015 - Jan 2017

- Established testing standards and quality goals for a V1 product launch in a new industrial software category.
-

Cimatron

Software QA Engineer

2012 - 2015

- Executed technical quality assurance for complex CAD/CAM manufacturing software, testing toolpaths, 3D modeling features, and CNC machine integrations.
-

SKILLS

- **Domain Expertise:** Industry 4.0, 3D Digital Twins, CAD/CAM, Manufacturing Execution Systems (MES), IoT/Edge Data Processing, ConTech/PropTech applicability.
- **Product Leadership:** Product strategy, GTM, Customer discovery, Enterprise beta management, Hardware-to-Software integrations.
- **Technical Execution:** Computer Vision pipelines, 3D volumetric data aggregation, Anomaly detection algorithms, RAG, Data curation (Label Studio).
- **Tools & Delivery:** Figma, Jira, Agile delivery, API integrations, Cloud & On-premise enterprise deployments.

EDUCATION

Ben-Gurion University of the Negev | Beer Sheva, Israel |

2008 - 2012

B.Sc., Mechanical Engineering
