

Michael Korenevsky

Product Manager · AI-Powered B2B SaaS | GTM & Launch | Agentic AI

📞 050-9542810 | ✉ korm85@gmail.com |  [linkedin.com/in/michael-korenevsky](https://www.linkedin.com/in/michael-korenevsky)

Product Manager with a strong engineering foundation, specializing in AI-powered B2B SaaS products. Built a career progression from hands-on QA, owning software quality at a product level, into full product ownership, covering discovery, product strategy, roadmap, GTM, and customer success. Experienced in shipping complex enterprise products, from engineering simulation software to AI-powered monitoring platforms, with measurable impact on customer efficiency and product adoption.

EXPERIENCE

Oqton

Senior Product Manager

Feb 2025 – Present

Oqton builds industrial SaaS products that automate manufacturing workflows and quality control, serving enterprise factories running high-value production at scale.

- ▶ Built an AI monitoring platform from concept to market: defined the product vision, led discovery, and signed 5 enterprise customers within 5 months of release.
- ▶ Reduced manual data review time by 98%, delivering ~\$150,000 in annual labor savings per machine.
- ▶ Improved the reliability of the platform's real-time AI-based defect detection model to 90% accuracy, the decision engine that determines whether a live, high-value production run continues or stops.
- ▶ Ran regular touchpoints with enterprise accounts to identify unmet needs early, consistently prioritizing product quality over scope expansion to protect retention.
- ▶ Simplified the onboarding process to accelerate time-to-value: every day without the product running was a day of unmonitored production risk for the customer.
- ▶ Embedded agentic AI tools (Claude Code, OpenClaw, Figma Make) into daily PM workflows and initiated an internal RAG-powered knowledge portal, reducing team dependency on PM and engineering for internal queries.

Oqton

Product Manager – Simulation Suite

Feb 2022 – Feb 2025

- ▶ Defined the product scope and UI/UX for three interconnected simulation modules, making complex engineering outputs accessible to non-specialist users and enabling design validation before committing to expensive production runs.
- ▶ Ran recurring touchpoints with key customers to gather feedback and continuously refine the product roadmap.
- ▶ Ran beta validation with 2 enterprise customers; published 2 whitepapers following beta completion, supporting sales credibility and market positioning.
- ▶ Owned GTM execution for each release: in-product tutorials, release notes, and sales enablement messaging, ensuring both users and the sales team could extract value from day one.

3D Systems

Global technology leader: industrial design & production software (2,000 employees)

Software QA Team Lead

Jan 2017 – Feb 2022

- ▶ Led a team of 4 QA Engineers: hiring, onboarding, and performance development.
- ▶ Managed release schedules and cross-functional sign-offs across engineering, QA, and support to ensure consistent, on-time delivery.
- ▶ Took ownership of defining what "ready to ship" meant for the team: setting testing scope, coverage expectations, and quality gates that held across multiple release cycles.

Software QA Engineer – Founding Team

2015 – Jan 2017

- ▶ Part of the founding team for a V1 product launch, setting testing standards and quality goals for a new software category.

Cimatron · *Software QA Engineer*
CAD/CAM manufacturing software, early career role

2012 – 2015

SKILLS

Product Leadership	Product strategy, GTM, Roadmap planning, Customer discovery, Stakeholder management
Applied AI / ML	AI-augmented PM workflows, RAG, Data curation (Label Studio); shipped products powered by Computer Vision
Tools & Delivery	Figma / FigJam, Jira, Agile delivery, Release management, Cloud & On-premise software

EDUCATION

Ben-Gurion University of the Negev
B.Sc., Mechanical Engineering · Beer Sheva, Israel

2008 – 2012
