

MICHAEL KORENEVSKY

Senior Product Manager Enterprise AI & High-Compliance
Software

050-9542810
korm85@gmail.com

SUMMARY

Product Manager with a strong engineering foundation, specializing in AI-powered enterprise software. Built a career progression from hands-on QA, owning software quality at a product level, into full product ownership, covering discovery, roadmap, launch, and customer success. Experienced in shipping complex enterprise products, from manufacturing simulation tools (3DXpert) to AI-powered quality monitoring platforms (AMVero).

EXPERIENCE

Senior Product Manager

Feb 2025 – Present

Oqton

Oqton builds industrial SaaS products that automate manufacturing workflows and quality control, serving enterprise factories running high-value production at scale.

- Built AMVero from concept to market: defined the product vision, led discovery, and signed 5 enterprise customers within 5 months of release.
- Reduced manual data review time by 98%, delivering ~\$150,000 in annual labor savings per machine.
- Improved the reliability of AMVero's real-time AI-based defect detection model to 90% accuracy, the decision engine that determines whether a live, high-value print job continues or stops.
- Ran regular touchpoints with enterprise accounts to identify unmet needs early, consistently prioritizing product quality over scope expansion to protect retention.
- Simplified the onboarding process to accelerate time-to-value: every day without the product running was a day of unmonitored production risk for the customer.
- Accelerated core PM workflows (discovery, competitive analysis, PRD drafting, and feature prototyping) by embedding AI tools (Claude Code, OpenClaw, Figma Make) into daily work.

Product Manager - Predictive Simulation Suite

Feb 2022 – Feb 2025

Oqton

- Took a third-party simulation engine and shaped it into three interconnected modules for 3DXpert, defining both the product scope and the UI/UX to make complex physics outputs accessible to non-simulation engineers, enabling part validation before committing to expensive machine time and materials.
- Ran recurring touchpoints with key customers to gather feedback and continuously refine the product roadmap.
- Ran beta validation with 2 enterprise customers; successfully published 2 whitepapers fol-

lowing beta completion, supporting sales and market credibility.

- Owned go-to-market execution for each release, including in-product tutorials, release notes, and sales enablement messaging, ensuring both users and the sales team could extract value from day one.

Software QA Team Lead

Jan 2017 – Feb 2022

3D Systems

Global technology leader: industrial design & production software (2,000 employees)

- Led a team of 4 QA Engineers: hiring, onboarding, and performance development.
- Managed release schedules and cross-functional sign-offs across engineering, QA, and support to ensure consistent, on-time delivery.
- Took ownership of defining what "ready to ship" meant for the team: setting testing scope, coverage expectations, and quality gates that held across multiple release cycles.

Software QA Engineer - Founding Team

2015 – Jan 2017

3D Systems

- Part of the founding team for the 3DXpert V1 launch, setting testing standards and quality goals for a new software category.
- Partnered with engineering to validate assumptions through rapid release cycles and frequent updates.

Software QA Engineer

2012 – 2015

Cimatron

CAD/CAM manufacturing software, early career role

SKILLS

Product: Market launch, Roadmap planning, Customer discovery, Stakeholder management

Applied AI/ML: AI-augmented PM workflows, RAG, Data curation (Label Studio); shipped products powered by Computer Vision

Tools & Delivery: Figma/FigJam, Jira, Agile delivery, Release management, Cloud & On-premise software

SIDE PROJECTS & HANDS-ON AI PROTOTYPING

- **Agentic Development Experiments:** Use AI as an active PM collaborator: running discovery sessions, drafting PRDs, stress-testing roadmap decisions, and generating competitive analysis using Claude Code and OpenClaw. Focused on compressing the time between idea and actionable output.
- **Local AI Environments:** Self-host local LLMs (Ollama) to prototype and test RAG-based knowledge retrieval systems, with hands-on tuning of model behavior for specific use cases.

EDUCATION

Ben-Gurion University of the Negev | Beer Sheva, Israel
B.Sc., Mechanical Engineering

2008 – 2012

LANGUAGES

Hebrew (Native), English (Professional), Russian (Fluent, spoken)
