

Michael Korenevsky

Product Manager · Physical AI & IoT | GenAI Workflows | Enterprise SaaS

☎ 050-9542810 · ✉ korm85@gmail.com ·  linkedin.com/in/michael-korenevsky

Summary

Product Manager with a strong engineering foundation, specializing in AI-powered products that operate at the intersection of physical machines and intelligent software. Experienced in building systems that ingest real-time IoT data from physical devices, apply AI models to derive actionable insights, and deliver measurable outcomes in enterprise environments. Hands-on with GenAI tools and agentic workflows in daily product and development work.

Experience

Oqton

Senior Product Manager | Feb 2025 – Present Oqton builds industrial SaaS products that automate manufacturing workflows and quality control, serving enterprise factories running high-value production at scale.

- Connected industrial 3D printers as IoT data sources, ingesting real-time machine telemetry and visual sensor data into an AI pipeline that detects defects and makes autonomous decisions on whether a live production run continues or stops.
- Drove 98% reduction in manual data review time, delivering ~\$150,000 in annual labor savings per machine by replacing a manual monitoring process with an AI-powered automated workflow.
- Improved the AI detection model to 90% accuracy by personally curating training data using Label Studio, working directly with data science teams to close the gap between model behavior and real-world outcomes.
- Built a self-serve knowledge system for sales, marketing, and operations teams to resolve technical product questions independently, reducing ad-hoc requests to engineering and PM, implemented as a RAG pipeline on a locally hosted LLM connected to live product documentation.

Oqton

Product Manager – Simulation Suite | Feb 2022 – Feb 2025 Oqton, owned a separate enterprise software product line responsible for strategy, roadmap, and GTM.

- Shaped a third-party physics simulation engine into three workflow modules within 3DXpert, enabling engineers in medical, aerospace, and defense to validate designs digitally and get prints right on the first run, eliminating costly trial-and-error production iterations.
- Identified through customer feedback that complex multi-parameter workflows were the primary friction point, leading to the prioritization of visual scripting that turned multi-step configurations into single-click operations.
- Ran beta validation with 2 enterprise customers; published 2 whitepapers following beta completion, supporting sales credibility and market positioning.
- Bridged between the physics engine development team and enterprise customers to refine simulation requirements and validate model accuracy against real manufacturing use cases, ensuring outputs matched the precision needed for production decisions.

3D Systems

Software QA Team Lead | Jan 2017 – Feb 2022

- Took ownership of defining what "ready to ship" meant for the team: setting testing scope, coverage expectations, and quality gates that held across multiple release cycles.

Software QA Engineer – Founding Team | 2015 – Jan 2017

- Part of the founding team for a V1 product launch, setting testing standards for a new enterprise software category.

Cimatron

Software QA Engineer | 2012 – 2015 CAD/CAM manufacturing software, early career role

Skills

Category	Skills
Product Leadership	End-to-end product ownership, Roadmap planning, Customer discovery, Stakeholder management, GTM execution
Applied AI / ML	AI feature delivery in production, RAG, LLM integration, Data curation (Label Studio), AI-augmented PM workflows; shipped products powered by Computer Vision and IoT telemetry
Domain	Physical AI, Industrial IoT, CAD/CAM software (3DXpert, Cimatron), 3D manufacturing workflows
Tools & Delivery	Figma / FigJam, Jira, Agile delivery, Release management, Cloud & On-premise software

AI Projects

- Runs a personal multi-agent development setup: OpenClaw as orchestrator and AI assistant, coordinating OpenCode as the development agent via ACP (Agent Context Protocol), used to design and build applications end-to-end on home infrastructure.
- Self-hosts a RAG-based knowledge system using Ollama for daily technical research and documentation retrieval.

Education

Ben-Gurion University of the Negev | Beer Sheva, Israel *B.Sc., Mechanical Engineering* | 2008 – 2012
